## INSTALLATION STEPS

1) Remove the tire from the tire well. Loosen the bumper fascia material from the inner beam and trim enough to fit the hitch bracket to the bottom of the beam as shown. The hitch will also fit up against the bottom of the tire well.
2) Make sure the hitch is centered and square on the car. Check the hitch ball/bumper clearance. Using the hitch as a template, drill the bumper four places $1 / 2^{\prime \prime}$ diamteter for rectangular U-bolts. Drill the tire well four places for $3 / 8^{\prime \prime}$ diameter screws.
3) Place the rectangular U-bolts into the bumper beam as shown.
4) Place the hitch over the two U-bolts in the bumper and finish fastening to the car as shown. Fender washers must be placed inside the tire well opposite the hitch.
5) Torque all $3 / 8$ " fasteners to 35 lb -ft, and all $7 / 16$ " fasteners to $50 \mathrm{lb}-\mathrm{ft}$. NOTE: Do not use impact wrench on U-bolts.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
